Cholesterol content in the different parts of rabbit  
brain increases with age, and more rapidly in the  
white substance than in the gray. The content of  
saturated and unsaturated phosphatides have the ten-  
dency to increase with age, however not evenly in  
the different age groups and rather less intensively  
than was observed in the case of cholesterol. In  
adult animals the amount of saturated and unsaturated  
phosphatides diminishes. (Author)

Rough draft trans. of Zhurnal Fizicheskoy Khimii  
(USSR) 1959, v. 33, no. 2, p. 411-415.

DESCRIPTORS: \*Magnesium alloys, \*Magnesium,  
\*Corrosion.

Magnesium and its alloys are subjected to greater corrosion in slits than in electrolytes. The dependence velocity of corrosion on the dimension of slits is described by complicated curves characterized by the presence of maxima at certain value of the width of the slit. The part played by macroelements in development of slit magnesium and its alloys corrosion, contrary to previously investigated cases of slit corrosion, is negligible due to their small effectiveness.
